

THE SC JOHNSON PROFESSIONAL TARGETED HYGIENE PROGRAM

BREAK the CHAIN of infection

The Covid-19 pandemic has highlighted the risk of infectious diseases and the need for a practical, **TARGETED APPROACH TO HYGIENE**; one that can work in combination with social distancing and facial coverings to break the chain of infection.

There's a misconception that commonly touched surfaces are the points of highest risk. However, it's the behaviour of people touching those surfaces without practicing hand hygiene that is the real issue.

Experts¹ have identified that when in workplaces and public facilities there are 8 moments of high-risk for spreading infection. All people working in or visiting these places can help break the chain of infection and eliminate the risk of spreading infections from person to person, by washing their hands or sanitizing at these 8 moments.

1 SC Johnson Professional has worked with Prof Sally Bloomfield and the International Forum on Home Hygiene (IFH) to develop the "8 Moments of Hygiene for Public Spaces".

8 MOMENTS FOR TARGETED HYGIENE

targetedhygiene
break the chain of infection

Touching common surfaces.

After coughing, sneezing, blowing your nose.

Returning to and leaving your workspace.

Getting food prepared.

Eating food.

Touchpoints in a restroom.

Entering and exiting the building.

Disposing of waste.
